BOTTOM SKIDS

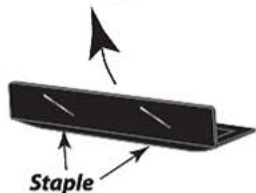

The Bottom Skid is designed to protect the jamb from chipping and to make the door easier to slide. It's intended for use with both **interior and exterior** doors from the point of manufacture to the point of installation.

- Now available for 2" x 6" and 2" x 4" construction.
- Protects flat and split jambs from damage during shipping and handling.
- Easy to install - can either be stapled from side into jamb or into specially designed indentations on the bottom into the bottom of the jamb.
- Allows the installer an easy, gliding motion for moving the door.
- Sleek continuous design reduces chance of part being dislodged by rough floors, wire racks or rollers.
- A cost effective alternative to wood sticks, cardboard or corrugated plastic.

Remove before installation
