

PVC JAMB EXTENSION

Aribell's Cellular PVC is extruded from first grade virgin PVC Powder.

Durability: PVC, in addition to being effective against termites and other insects, requires very little maintenance and no protective paint.

Resistance: Amazing resistance against the cold, wind, snow, rain, sun, shock, UV rays and pollution.

Energy: Energy efficient designs through microbubbles design.

Pliability: Products easily bendable.

Aribell's rigid PVC Cap Stock is also made out of virgin PVC powder as opposed to second-generation granular PVC. All additives to counter impact as well as yellowing are in a virgin state when extruded for the first time. The finished product is therefore of superior quality, combined with a CAD-developed design, providing the best in terms of finished product.

The ultra glossy finish of our products prevents dirt from accumulating; the maintenance of the product is almost non-existent and its beauty will remain unchanged over the years.
